json-beautify

JSON.stringify with fixed maximum character width.

json-beautify is a fork of `JSON.stringify` [json2.js](#) implementation.

It has the exact same signature of `JSON.stringify` but it also adds an optional 4th parameter:

The maximum fixed character width (for instance 80).

Examples:

```
var beautify = require("json-beautify");
```

```
var obj = { str: "Hello World", num: 42, smallarray: [ 1, 2, 3, "foo",
```

With 100 fixed-spaces:

```
console.log(beautify(obj, null, 2, 100));
```

```
{
  "str": "Hello World",
  "num": 42,
  "smallarray": [ 1, 2, 3, "foo", {} ],
  "smallobject": { "foo": "bar", "bar": 42 },
  "bigarray": [ 1, 2, 3, "foo", { "foo": "bar", "bar": 42, "arr": [ 1,
  "bigobject": { "foo": [ 1, 2, 3, "foo", {} ], "bar": 42, "a": { "b":
}
```

With 80 fixed-spaces:

```
console.log(beautify(obj, null, 2, 80));
```

```
{
  "str": "Hello World",
  "num": 42,
  "smallarray": [ 1, 2, 3, "foo", {} ],
  "smallobject": { "foo": "bar", "bar": 42 },
  "bigarray": [
    1,
    2,
```

```
    3,  
    "foo",  
    { "foo": "bar", "bar": 42, "arr": [ 1, 2, 3, "foo", {} ] }  
  ],  
  "bigobject": {  
    "foo": [ 1, 2, 3, "foo", {} ],  
    "bar": 42,  
    "a": { "b": { "c": 42 } },  
    "foobar": "FooBar"  
  }  
}
```
